China under fire for virus spread

The head of the World Health Organization has publicly criticised China for its failure to report quickly the first cases of the pneumonia-like illness known as Severe Acute Respiratory Syndrome, or Sars.

Gro Harlem Brundtland also highlighted China's lack of co-operation with the international community in the early stages of the outbreak which has now killed more than 90 people - most of them in China or Hong Kong.

She said that in her five years as head of the WHO this was the first time a disease had spread internationally in this way.

Although Sars began in southern China last November, it is only recently that China has allowed the WHO access to the area.

The criticism came as China announced several more deaths from the virus, taking the total above 50 people dead there.

They include China's first foreign victim - a Finnish man who died in a Beijing hospital.

In other developments:

- Reports from Bhutan say the trade and industry minister has been among the first people to be quarantined under a new law

Hong Kong is one of the worst affected areas

“ Next time something strange and new comes... let us come in as quickly as possible ”
Gro Harlem Brundtland

Two-column text after the bare image. Lorem ipsum dolor sit amet, consectetur adipiscing elit.

Section 3e: WORKING single-column image (raw HTML img + div.single-column)

Two-column text before the div. This is the canonical working pattern for full-width images.

Section 15: Insights box

Two-column text before the insights box.

The Role of the Huanan Seafood Wholesale Market

Some scientists and China's public health officials have shifted their view on the role of the Huanan Seafood Wholesale Market in the pandemic since early 2020. Some now view the market as a potential site of community spread rather than where the initial human infection may have occurred. - On January 1, 2020, China's security authorities shut down the market after several workers fell ill in late December 2019. China focused early source tracing on the market and Hubei Province. - In January 2020, a scientific article described

clinical features of initial COVID-19 infections and found that some patients did not have any known association with the market.

Two-column text resumes after the insights box. Lorem ipsum dolor sit amet, consectetur adipiscing elit.
